

Turn time into benefits

Turn time into benefits

- Do you want to maximise your working time?
- Would you like to prevent long and risky battery changes (more than 10,000 injuries in 2005)?
- Do you intend to use each break time or rest time for charging, then being able to use the same battery along the shift?
- Do you want to limit investment in battery handling systems and in charging rooms (with all the legal constraints)?

Lifespeed 3000: The new high-speed charge concept might be the right solution for you

- Use this charger as a tank station in your plant, for a few minutes til maximum 3 hours 30 for a full charge, depending on conditions of use and depth of discharge. Every break or rest time is an opportunity to charge, always near the working location, no waste of time for a long drive to the charging station.
- No need for battery handling systems or additional batteries, no risks of accidents.
- Save energy and time with this new charging solution, fitted with communication for a full battery fleet management.

A comprehensive range of chargers for a large choice of battery capacities:

	Power (kW)	Battery maximum capacity (Ah)		
		24 V	48 V	80 V
Lifespeed 3010	10	500	425	-
Lifespeed 3015	15	650	625	400
Lifespeed 3020	20	-	875	575
Lifespeed 3030	30	-	1250	775
Lifespeed 3040	40	-	-	1150

Example of cost savings

- Up to 50% less time needed in battery changes
- Up to 100% cost savings in battery handling systems
- Up to 10% energy savings
